

HASINA ANSARI, PMP®

TECHNICAL PROJECT MANAGER

Ahmedabad, Gujarat 380028 | +91 98240 64933 | ansari.hasina@gmail.com | linkedin.com/in/hasina-ansari-pmp

PROFESSIONAL SUMMARY

PMP®-certified Technical Project Manager with 14 years in IT — 10 years leading end-to-end delivery and 4 years as a hands-on developer. Own client requirements, estimation, timeline and budget sign-off, and delivery for teams of up to 15. Delivered platforms serving 8,000+ active users and processing 400–700 orders per day across e-commerce, mobile and AI automation. Trained and mentored 50+ engineers.

CORE COMPETENCIES

Project Management: Agile & Scrum, SDLC, Sprint Planning, Effort Estimation, Budget & Timeline Ownership, Risk Management, Stakeholder Management, Resource Allocation, UAT Coordination, Team Mentoring

Tools: Jira, Confluence, Git, n8n, Make.com, Zapier

Technical: PHP, Zend Framework, Magento 1 & 2, Vue.js, GraphQL, Flutter, Java Spring Boot, REST/SOAP APIs, AWS (ECS, RDS), MySQL, EDI

PROFESSIONAL EXPERIENCE

CYBERCOM CREATION — Ahmedabad, India

Project Manager / Team Lead

Aug 2016 – Sep 2026

Full project management ownership across concurrent e-commerce, mobile and automation workstreams — client requirements, estimation, budget and timeline sign-off, resource planning, delivery and post-release support. Managed up to 3 projects simultaneously.

Enterprise Sales Analytics Mobile Application | Flutter, Java Spring Boot, AWS | 7-member team (2 FE, 2 BE, 2 QA, 1 DBA) | Oct 2025 – Sep 2026

- Acted as sole point of contact for 3 client stakeholders — gathering requirements, estimating effort, agreeing timelines and budget, and reporting progress daily.
- Delivered six releases (V1–V6) with zero failed deployments; no reported issue has taken more than one working day to resolve.
- Scaled the platform to 8,000+ active users with ~6,000 daily logins, peaking near 10,000 on monthly early-bird sales days.
- Directed database optimisation with the DBA: 10M+ (crore-scale) records now query smoothly on entry-tier AWS RDS, cutting DB cost from \$500 to \$380/month and reducing ECS memory from 16 GB to 4 GB — a 75% reduction.
- Ran daily standups, provided technical direction to the team, and conducted UAT directly with end users before every release.

1stopbedrooms.com — US E-Commerce Platform | Magento, Vue.js, GraphQL | Teams of up to 15 | 2012 – 2025

- Concurrent Order Editing — Led a 15-member team to re-engineer Magento's order flow so a salesperson could hold up to 30 orders open and unsaved simultaneously, with every edit preserved as new customer calls arrived. Raised throughput from roughly 10 orders per salesperson per day to 30 customers handled concurrently — a 3× improvement on a platform processing 400+ orders daily and 700+ during sale periods. Delivered in one month.
- Salesperson & Commission Engine — Delivered a commission platform for 40+ salespeople covering tiered upsell commissions, concurrent multi-agent order editing from the customer helpline, automated clawback on cancelled items, and bonus, award and penalty rules.
- Unified Order History — Designed a consolidated order timeline exposing the full downstream impact of a single user action — item additions and removals, payment adjustments, manufacturer order updates, status transitions, cancellations and action-required routing — significantly reducing support queries from salespeople and customers.
- MOR Warehouse Fulfilment — Led a 10-member team (2 senior developers, 6 junior developers, 2 senior QA) to map 1,500+ warehouse parts to complete Magento products, routing orders to in-house stock when available. Reduced customer delivery time from 7–10 days to 3 days.
- Frontend Re-platform — Directed the rebuild of home, brand and product detail pages in Vue.js and GraphQL, delivering ahead of a peak sale deadline with all Chrome performance metrics passing in green.

AI Automation & Multi-Agent Orchestration | n8n, Make.com, Zapier | 2-member team | May 2025 – Oct 2025

- Delivered a multi-agent system that coordinates automated agents to resolve customer queries from a company knowledge base, completed within a fixed 3-month window.

Senior Software Engineer

Aug 2014 – Aug 2016

- Built SOAP and JSON web services and integrated third-party APIs including NDFD weather data and geolocation services.

Software Developer

Aug 2012 – Aug 2014

- Developed on Zend Framework and Magento — custom module creation, extension installation and payment gateway integration.

FREELANCE CONSULTANT — Upwork

Automation Consultant (undertaken with employer approval)

2025

- Delivered an integrated WhatsApp, Instagram and Messenger chatbot on n8n for an international client — owning scope, estimation, delivery and client communication end to end with a single developer. Completed to client satisfaction with positive public feedback.

CERTIFICATIONS

- Project Management Professional (PMP)[®] — Project Management Institute, Oct 2023 (Credential ID 3693816)
- Practical Application of Gen AI for Project Managers — PMI, Sep 2025
